

## Predictions of Y2K

*'I will bring modern civilisation to its knees, cities will crumble, computers will exterminate humanity and begin a nuclear winter, humanity will be made a stain on the Earth and a new world will...'*

## Y2K in real life

*'I broke a clock once'*

# THE Y2K BUG

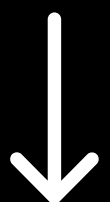

Made by Pertea Alexandra & Nașca Răzvan

During 1960-1980, programmers used a two-digit code for the year (data storage was costly). As the year 2000 approached, computers interpreted it as it being 1900 instead. This has led to some problems: banks miscalculating their rates of interest, airlines being put at risk (there were very few flights back in 1900), etc.

In the end, there were very few problems that affected few countries. Due to the lack of results, many people dismissed the Y2K bug as a hoax or an end-of-the-world cult.
